

# Fuel Management Solution

Fuel Management	Analytics	Administration
<p>This is a functional module which will facilitate users to do the fuel planning. It will also show the data collected from field for validations and user actions.</p>	<p>This module consists of predefined analytical reports which help Energy team to understand about the energy consumption patterns and trends.</p>	<p>Energy Manager uses this module to configure and customize the fuel solution according to regional topology.</p>

## Fuel Filling Using MobileApp

Filling is a geo-fenced activity. Filler is also supposed to define his next action. This will help the audit team to track the filler location effectively.
